

## Renewcell's expected production development in June 2023

Production from Renewcell 1 is expected to reach 2,200-2,400 metric tons in June 2023, of which 2,100-2,300 metric tons are expected to be of prime quality and 2,200-2,400 metric tons are expected to be delivered to customers. The production in the month has been impacted by maintenance stops to upgrade and install new equipment in the shredding area.
